

International Symposium on Fireworks Society Ltd

19th International Symposium on Fireworks (19th ISF)
**International Conference & Exhibition Center/
Turandot Hotel**
Liling, Hunan, China
April 21-25, 2025

AUTHOR INSTRUCTIONS

INTRODUCTION

Note: These author instructions have been written in the required ISF paper format.

The theme for the 19th ISF is "China's Firework Industry and Culture Promotes the Safe Use of Fireworks for Cultural Festivities Around the World." Worldwide, the access to consumer fireworks by individuals for their own personal use and enjoyment ranges from nearly unrestricted to complete prohibition by government regulators. Safety concerns usually form the basis for restrictions on many products, including access to and use of consumer fireworks. Do the accidental injury data justify the safety concerns leading to prohibition of consumer fireworks? Are there other concerns such as the environmental impact on the use of consumer fireworks that influences their prohibition? Can consumer fireworks be designed and manufactured to be used more safely by the general public without there being any diminishment in their pyrotechnic effects and attractiveness? Papers on these subjects as well as those on the manufacture, transportation, storage, and use of entertainment fireworks are also encouraged as these will be of great interest to the registrants to the 19th ISF in Liling, in 2025. Technically rigorous papers, specifically dealing with the sensitivities, energy output, and new technologies for use of pyrotechnic compositions are also highly desirable.

Papers accepted for presentation will be printed in the Proceedings of the 19th International Symposium on Fireworks, which will be distributed to the attendees at the Symposium as part of the registration package. Every paper accepted for publication must be presented by the author or in the case of multiple authors by one of the authors. If an author is unable to present a paper because of, for example, illness or transportation problems, then the author or a representative must notify a Director of the International Symposium on Fireworks Society Ltd (ISFS). The Chairman of the 19th ISF will then be notified to make necessary changes to the ISF Program. Without such prior notifications, a "No-Show" will be viewed very unfavorably by the ISFS in terms of future paper acceptances. Also, in the case of a "No Show," the copyright to the published paper(s) remains with the ISFS.

An author or coauthor of multiple papers may present, as a speaker, a maximum of two papers. If an author or coauthor submits more than two papers for publication in the 19th ISF Proceedings, he/she may present an additional paper as the topic of a roundtable discussion.

Although a procedure has been in place for past ISFs, it will be now made official, that authors may request that their paper, be REFEREED. That is, if a paper is of substantial quality and presents new material, then it will be reviewed by at least three Reviewers chosen by the ISFS Ltd BoD and will be deemed as REFEREED.

The following instructions will enable you, the author(s), to prepare your manuscript. For the Symposium Proceedings to have a professional appearance, we, the ISFS editors, require uniformity in the style and format of the manuscripts submitted by the authors. Attention to detail is a must. **These instructions have been prepared following the required style and format.** If there are any questions regarding preparation of your manuscript, please contact the ISFS President and 19th ISF Proceedings Editor, Mr Ettore Contestabile (contact information provided herein). Papers containing blatant advertising will be returned.

Submit the complete paper as a Microsoft Word document by **March 15, 2025** to your regional Director as an email attachment. Include in the email the name of the contact author and the speaker's name. Upon receipt, the paper will be inspected for completeness and compliance with the subject matter and the required format. If the paper is incomplete or non-compliant, the contact author will be notified for appropriate action.

Paper presenters, please note. During the presentation of a paper, no photography or video recording in the Conference room by any 19th ISF attendee is allowed, except by "authorized" ISFS personnel. General photography and video recording for personal use only by 19th ISF attendees will be allowed during lunch breaks and the beginning and end of the presentation day, but the sale of any photos or videos recorded is prohibited.

MANUSCRIPT PREPARATION

Language

Papers must be in English. The official language of the 19th International Symposium on Fireworks is English (USA).

When writing your paper, please keep in mind that the Symposium is **international**. Attendees and many others who will read your paper may not have English as their first language. The paper should be technically accurate and concise. Use short words and simple sentences wherever possible and avoid unfamiliar jargon. Any abbreviation you do use, even if it is familiar to most individuals in the international fireworks community, should be defined the first time it appears in the abstract and the body of the paper.

Format

Compose your manuscript in Microsoft Word

Page set-up: All margins – 1" (2.54 cm)
Paper – A4

Use the Times New Roman (11) font, which is used in these instructions. Do not indent paragraphs. Paragraphs should be single-spaced. The entire text must be left and right justified except for the References or Bibliography which must be only left justified.

The length of the paper should not exceed 20 pages, including text, figures, tables, and references. Please contact the 19th ISF Proceedings Editor if there is a problem with this constraint.

Sometimes a submitted paper may be re-formatted slightly to ensure it has an odd number of pages. This will allow all papers to conform with the Proceedings layout, where the title page of each paper is on the right, an odd-numbered page.

Major headings are to be CAPITALIZED, **boldface** and centered, not underlined. Major headings include: **TITLE, ABSTRACT, INTRODUCTION, APPROACH/METHOD, RESULTS, DISCUSSION,**

CONCLUSIONS, ACKNOWLEDGEMENTS, REFERENCES or BIBLIOGRAPHY, and APPENDIX.

Subheadings, in **Boldface**, but not underlined, are to be positioned on the left margin with the first letters capitalized. Additional subheadings can be boldfaced *italic* or regular *italic* with the first letters capitalized.

Leave two spaces above and one below each major heading. Leave one space above but none below for the subheadings.

Use SI units or acceptable metric equivalents. Other units may be given in brackets following the metric unit. For numbers, use a point (interpunct) as the decimal mark and a comma as the digit group separator. Examples: 1,234.56 m and 0.1234 g. Please be mindful of the rules of Significant Figures (Digits) in reporting your data.

Do not number the pages.

The Title/Abstract Page

The **TITLE** is a major heading and should be centered immediately below the top margin. The **TITLE** is followed by the names of the author(s), the complete mailing address with the author's affiliation (name, address, state/province/region, country, and postal code). If you wish, your email address can also be included.

Below this block is the **ABSTRACT**. The **ABSTRACT** should be approximately 200 words in length. It states the purpose(s) or reason(s) for conducting the research or addressing the topic, the objective(s), the approach used in achieving the objective(s) (e.g., experimental technique or method), and a brief statement of the results. Only the **TITLE**, author(s), address(es) and affiliation(s), and the **ABSTRACT** are to appear on this single, Title/Abstract page.

Introduction

All papers must have an **INTRODUCTION**. It is here that you provide in broader detail the paper's purpose and/or focus, objective(s), and background information for the reader. You should address previous work done by you and certainly others on the subject of your paper and its relevance.

Figures

Graphs, drawings, photographs and illustrations are to be labeled as Figures. Every Figure must be addressed in the text, numbered consecutively, and titled. Captions must be placed one line below the figures (centered). Figures must be imbedded in the text as close as possible to where they are referenced. Format the word "Figure" and its associated number in **bold** and use "-" to separate from the caption text.

Example:

Figure 1 - Burst height dependence on mortar length

Tables

Every Table must be addressed in the text, numbered consecutively and titled. Tables must be imbedded in the text as close as possible to where they are referenced. Format the word "Table" and its associated number in **bold** and use "-" to separate from the caption text. Table captions are to be placed immediately (no space) above the tables (centered). Example:

Table 1 - Burst heights for the shells investigated

References

Very rarely are papers submitted for publication in the ISF Proceedings which report advances in the technology and/or the art of fireworks, which are so novel, so unusual, or even revolutionary, such that the

past efforts of others can be ignored. References not only recognize the past contributions to a specific subject, but their inclusion in a paper provides the reader with a sense of continuity and progress, and a measure of the paper's credibility. While you may not have access to all fireworks publications, it is imperative that all papers published in previous ISF proceedings relevant to the subject of your paper be included in your references.

The responsibility for the accuracy of **REFERENCES** rests with you, the author(s). **REFERENCES** in the body of the paper should appear as numbers in superscript after the author's surname, e.g., Schneider¹, and listed consecutively and correspondingly in the reference section in the order in which they are cited in the text. In case of two authors, separate the surnames with "and" for citation in the text (e.g., Tang and Schneider²). For three or more authors, all the authors can be listed or only the first followed by "et al". References may also be used to provide elaborations or explanations of interest, which if provided in the body of the paper may be distracting to the reader (e.g., "Gurney⁴ analysis," or, "often reported as 80 Joules⁵"). You must ensure that all references cited in the text are listed, and vice versa. The list of **REFERENCES** is located at the end of the document and before any Figures and Tables (if not imbedded in the text), and Appendices. Note that only the Title of the reference is in *italic*. Below are examples of references in the proper format.
